

## tado° launches HomeKit-compatible Smart AC Control

Never again leave home without forgetting to switch off your AC

**London, 21 May 2019** - tado°, the leader in intelligent home climate management, today brings to market its new Smart AC Control V3+. With HomeKit-compatible hardware and a new app, the Smart AC Control connects air conditioners and heat pumps to the home's Wi-Fi replacing the infrared remote control. The product is available starting today at £89.99 from leading retailers across Europe as well as from tado.com.

### New app for a healthier home

With an emphasis on promoting a healthy home environment, the new app has a fresh design and introduces several features, such as the Air Comfort Skill which measures air freshness inside and outside of your home. It also provides meaningful tips and advice on how to improve your indoor air as healthy air can enhance sleep and productivity, while minimising the risk of catching a cold.

The Air Comfort Skill complements a range of features like Geofencing, Open Window Detection, Weather Adaptation, and insightful energy reports that save energy and improve comfort. Users can also make use of the Smart Schedule and settings to minimise AC noise levels and disruption by managing the fan speed and the time when it's running.

Those who wish to have full automation to manage their climate at home can subscribe to the Auto-Assist Skill for £2.99 per month or £24.99 a year. The Skill automatically adjusts your AC or heat pump when triggered by Geofencing or Open Window Detection, rather than sending you a notification.

### Apple HomeKit & smart home integrations

Apple HomeKit users can now integrate the Smart AC Control V3+ into their setup. This means you can ask Siri to change temperatures and add air conditioning into your HomeKit Scenes and Automations. As with the company's V3+ Smart Thermostats, the new Smart AC Control also works seamlessly with the Google Assistant and Amazon Alexa.

### Plug & play

"Our new Smart AC Control is designed to enhance your air conditioning and complement your home," says tado° Co-founder & CPO Christian Deilmann. "It's easy to install in just a few

minutes, simple to use, and fits any interior with its sleek design. tado° is the perfect addition to keep you cool and comfortable this summer, while saving you energy.”

### **About tado°**

Founded in Munich, 2011, tado° is the leader in intelligent home climate management. With its Smart Thermostats for heating and cooling, tado° works as your Climate Assistant with Skills such as Geofencing, Weather Adaptation, Open Window Detection, Air Comfort, and more. Having secured over USD 100m in funding and with ~200 employees, tado° reshapes the way energy is consumed at home for more comfort, savings, and wellbeing. [www.tado.com](http://www.tado.com)
