

tado° welcomes Google Home to Denmark

Danish users will now be able to control their tado° devices via the smart speaker

Copenhagen, 24 October 2018 - tado°, the leader in home climate management, is delighted to welcome Google Home to Denmark. Following the rollout in other European countries the integration with the Google Home now allows Danish tado° users to benefit from additional user-friendly possibilities in the way their heating and cooling systems are controlled.

With the Assistant on Google Home tado° users can set, increase or decrease their home temperature with tado°; for example: "Ok Google, set living room to 22 degrees", or "Ok Google, increase bedroom temperature by three degrees." Hence Danish tado° users will now be able to manage their temperature using hands-free voice control.

tado° has teamed up with Google and brought the Google Assistant to all of its devices since the official introduction of the smart speaker to the first European countries in 2017: from its Smart Thermostat and Smart Radiator Thermostat to the Smart AC Control for a more energy-saving and comfortable home experience.

tado° is the independent vertical leader of intelligent home climate control, which allows it to partner with all of the major voice platforms for the best user experience.

About tado°

Founded in Munich, 2011, tado° is the leader in intelligent home climate management. With its Smart Thermostats for heating and cooling, tado° works as your Climate Assistant with Skills such as Geofencing, Weather Adaptation, Open Window Detection, Air Comfort, and Boiler Repair Services.
