

Amazon's Alexa heats up Europe

Munich, 14. September 2016: As an official launch partner, tado° is delighted to team up with Amazon Echo to bring Alexa to the UK, Germany and Austria. Having already partnered with Amazon in the US, tado° is pioneering integration with Alexa in Europe.

Alexa is Amazon Echo's voice feature that allows users to talk to their devices. British, German and Austrian residents can now intuitively use hands-free heating control for more comfort, convenience and savings. Amazon Echo allows users to set, increase or decrease their home temperature with tado°; for example: "Alexa, set (living room) temperature to 22 degrees", or "Alexa, increase (bedroom) temperature by three degrees."

Our Smart Thermostats save users up to 31 per cent of their energy bill and have become a core part of connected homes. tado° works as a digital assistant in the background and automatically controls the heating based on your preferences and location. With today's Amazon Echo partnership, tado° users can now control their heating manually, via app or with their voice.

About tado°

Headquartered in Munich, tado°, the European market leader in intelligent home climate control solutions, was founded in 2011. With its Smart Thermostat and Smart AC Control, tado° revolutionises the way energy is consumed at home. Through the use of a geo-aware app, tado° automatically adjusts the temperature based on the residents' locations, enabling households to significantly save on energy costs while reaching a higher level of comfort.
