# Smart Thermostat Company tado° launches its IFTTT channels

**September 3, 2015 - At IFA, Europe's leading smart thermostat provider tado° today launches its two channels with the famous web service IFTTT (If This Then That). This will promote further integration of the tado° Smart Thermostat for heating and the tado° Smart AC Control for air conditioning with other applications, and allows for the unique creation of ideas for the intelligent home.**

tado° users can connect their tado° Smart Thermostat and Smart AC Control to other appliances and devices via IFTTT. Through these channels users can combine selected triggers and actions and combine them in their individual recipes. There are various possibilities from really simple ones just for fun to really useful combinations helping to save energy and increasing comfort and security at home.

The tado° geolocation feature can be used for purposes other than smart heating or cooling. For example, when the last tado° user leaves the house, not only will the heating automatically go to savings mode, but simultaneously the lights and electric home appliances like the coffee machine or TV switch off, the alarm system activates and the front door locks.

"tado°'s IFTTT integration enables our users to create their own unique intelligent homes to suit their lifestyles. This can also make their homes more comfortable and energy efficient with less effort," says Christian Deilmann, founder and CEO tado°.

The tado° IFTTT channels will be available here in the next few days:
- Smart Thermostat (Heating): https://ifttt.com/tado_smart_thermostat
- Smart AC Control (Air Conditioning): https://ifttt.com/tado_smart_ac_control
